

RPMI 1640 Medium

Cat. No. FI201

Storage: at 2-8°C in dark for one year

Description

Roswell Park Memorial Institute (RPMI) 1640 Medium is suitable for a variety of mammalian cells including HeLa, Jurkat, MCF-7, PC-12, human leukemic cells, PBMC, astrocytes, and carcinomas.

RPMI 1640 contains phenol red, sodium bicarbonate, L-alanyl-L-glutamine and HEPES. Compared to L-glutamine, L-alanyl-L-glutamine is more stable in solutions and reduces the build-up of toxic ammonia. This makes it a good substitute for L-glutamine.

For research use only, not for clinical diagnosis.
